

Les fondamentaux des emails et configuration de votre compte Klaviyo

L'étape cruciale concerne la vérification de votre nom de domaine.

Voici un guide détaillé :

Connect a domain

Configure domain

Back

Next

Enter your root domain

This will typically match your brand's website and the email addresses you use when messaging customers.

Root domain
Example: example.com

revemedia.fr

Connect a domain

Configure domain

Configure your sending domain

Let us know where you'll be sending your emails from. This should be a subdomain you're not using elsewhere.

marketing.revemedia.fr

Sending domain
Ex: "send" or "email"

marketing

Add a DMARC record to your domain

Your domain is missing a DMARC record, which some email providers require to deliver email. This may impact your ability to reach inboxes.

Add DMARC record

Recommended

DMARC is a key safety mechanism used to protect email sending domain reputation. [Learn more about DMARC](#)

Find your DNS zone file

You'll need access to your DNS provider to set up your custom domain. Select your provider and we'll walk you through finding the file.

Select your domain provider

Other ^

GoDaddy

Cloudflare

Shopify

IONOS

Other

5. Move onto the next step in Klaviyo.

Having trouble? This [Klaviyo article](#) can help.

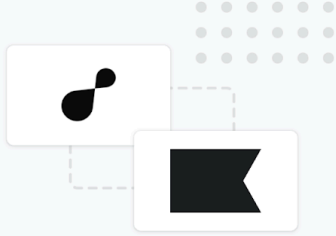

Automatically configure your domain with Entr

Entr makes it easy to edit your DNS records. Log in and we'll handle it from there.

- ✓ Fast, secure setup
- ✓ Accurate DNS detection
- ✓ Automatic configuration

Connect with Entr Set up manually

By selecting "Connect with Entr" you agree to the Entr [Terms of Service](#) and [Privacy Policy](#).

Add DNS records

Add a new record in your DNS zone file for each type and then copy and paste the **name** and **value** into each record.

Type	Name	Value
CNAME	marketing	u161779.wl030.sendgrid.net
CNAME	kl_domainkey	kl.domainkey.u161779.wl030.sendgrid.net
CNAME	kl2_domainkey	kl2.domainkey.u161779.wl030.sendgrid.net
TXT	@	klaviyo-site-verification=
TXT	_dmarc	v=DMARC1; p=none
