

L'importance de la segmentation & l'optimisation

Les segments peuvent être façonnés comme bon vous semble en fonction de différentes actions faites sur le site ou dans vos emails (achat, click sur un lien dans le mail etc)

Voici les segments essentiels :

ALL : Tous vos emails

  ALL

Segment

- Person can receive email marketing

AND

- Person has Placed Order zero times in the last 20 days

AND

- Person has Clicked email to unsubscribe zero times over all time

AND

- Person has Marked Email as Spam zero times over all time

AND

- Person has Bounced Email zero times over all time
where bounce_type equals Hard

AND

- Person can receive email marketing

ENGAGE : Les emails actifs

  ENGAGE

Segment

- Person has Opened Email is at least 1 in the last 60 days

AND

- Person has Placed Order zero times in the last 20 days

AND

- Person has Clicked email to unsubscribe zero times over all time

AND

- Person has Marked Email as Spam zero times over all time

AND

- Person has Bounced Email zero times over all time
where bounce_type equals Hard

AND

- Person can receive email marketing

NEW CLIENTS : Toutes les personnes qui ont passé une commande

^ ★ NEW CLIENT Segment

- Person has Placed Order equals 1 over all time
- AND
- Person has Clicked email to unsubscribe zero times over all time
- AND

- AND
- Person has Bounced Email zero times over all time
where bounce_type equals Hard
- AND
- Person can receive email marketing

CLIENTS VIP : Toutes les personnes qui ont passé minimum 2 commandes

^ ★ CLIENTS VIP Segment

- Person has Placed Order is greater than 1 over all time
- AND
- Person has Clicked email to unsubscribe zero times over all time
- AND
- Person has Marked Email as Spam zero times over all time
- AND
- Person has Bounced Email zero times over all time
where bounce_type equals Hard
- AND
- Person can receive email marketing

Idées d'éléments à A/B test par ordre d'importance

- Objet → Maximiser le taux d'ouverture
- Contenu → Maximiser le taux de clics

- Délais entre chaque email dans le cas des flows → Séquence rapide vs séquences longue

N'oubliez pas : 1 testing à la fois maximum pour toujours savoir réellement ce qui fonctionne avant de réitérer.
